Sales & Inventory Analytics for Precast RCC Products

PRESENTED BY:
Krishna Goel
Roll No. 23F3003674

Organisation Background

Laxmi Concrete Products is a Precast RCC Products trading firm located in Village Sunped, Ballabgarh, Haryana. Established in 2016 by Mr. Sanjay Goel.

Business operates in both B2B and B2C markets, supplies products to government contractors, infrastructure projects and retail customers.

Major Products

- RCC Manhole Covers with Frames
- RCC Slabs
- RCC Pipes
- RCC Benches
- RCC Bollards

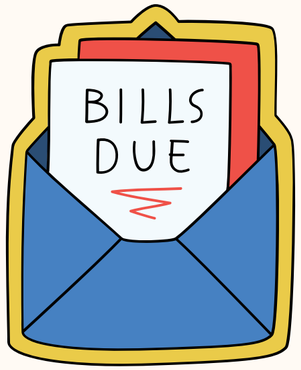
Business Challenges

1) MODERATELY UNPREDICTABLE DEMAND

- Demand varies significantly across months.
- Difficult to accurately forecast demand.
- Leads to inventory pileup.

2) PAYMENT DELAYS AND DEFAULTS RISK

- Sales frequently occur on credit.
- Clients often delay payments or even default.
- Causes cash flow instability.



Data Collection

Primary data was collected directly from Laxmi Concrete Products ledger entries during offline interaction with the proprietor. Data was structured in Microsoft Excel.

Sales & Inventory Data

September 2024 - December 2025
SKU level transaction record

April 2025 - February 2026
Customer transaction record

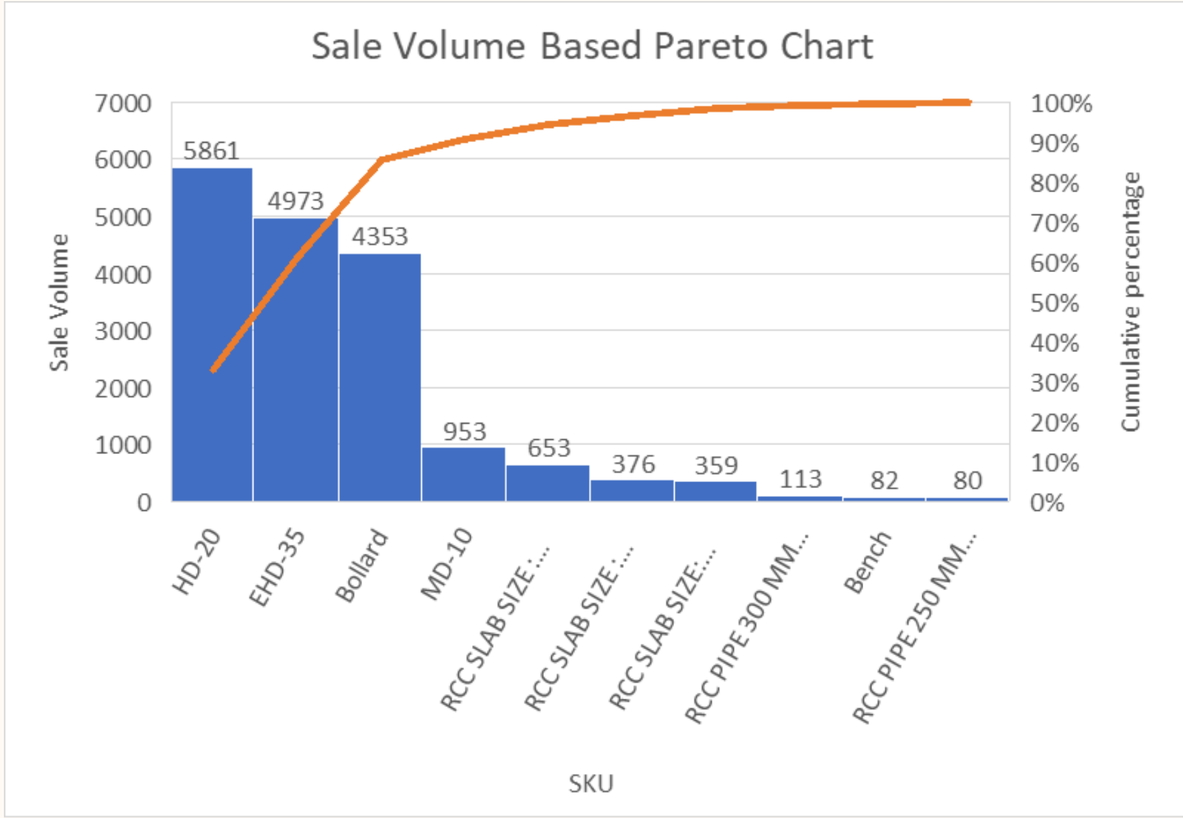
Variable collected -

- Customer name
- Opening balance
- Debit transactions
- Credit transactions
- Closing Balance

Methodology

Tools Used	Data Prepation	Analytical Methods	Purpose of Analayis
• Microsoft Excel for data prepration & analysis • Forecast sheet tool • Excel Formulas • Excel Charts for visualization	• Data cleaning and monthly aggregation of sales data. • Removed noise and unwanted parameters. • Customer ledger data organized in a sheet for analysis.	• Trend Analysis • Time Series Forecasting • ABC Analysis using Pareto Principle • Days Sales Outstanding • Outstanding Amount Proportion	• To understand sales & inventory patterns • Identify high demand SKUs • Identify High Risk Customers • Support better decision making

Pareto & ABC Analysis



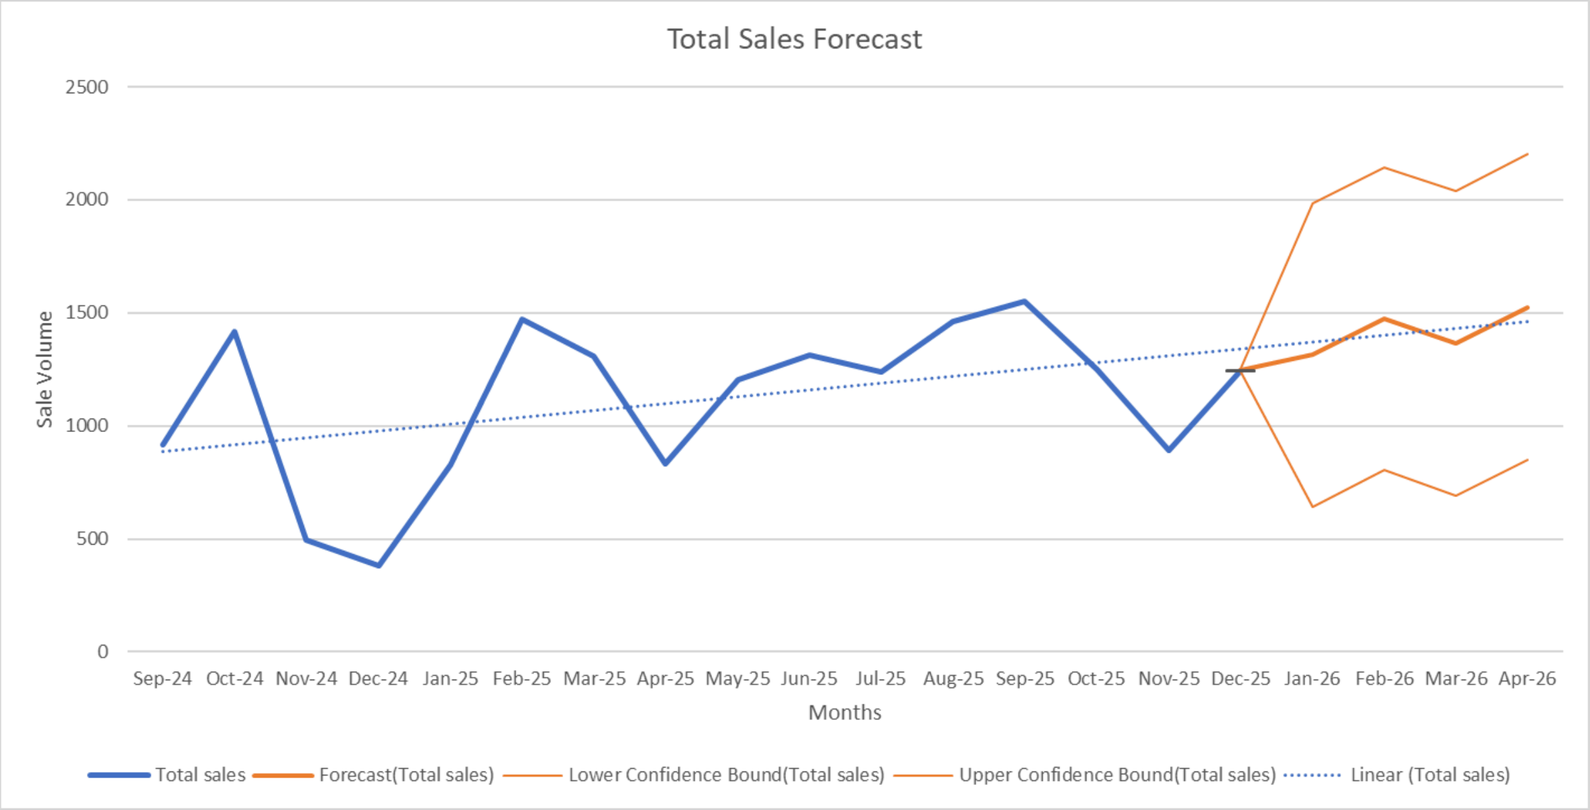
Findings

- Sales distribution is concentrated among small number of SKUs.
- Category A : Manhole (HD-20 & EHD-35)
- Category B : RCC Slabs, Bollards & Manhole MD-10
- Category C : RCC Pipes & Benches

Key Insight

- Demand follows Pareto Principle, where small number products generate majority of sales. Category A SKUs genrate more than 60% of sales and 80% of revenue.

Demand Forecasting



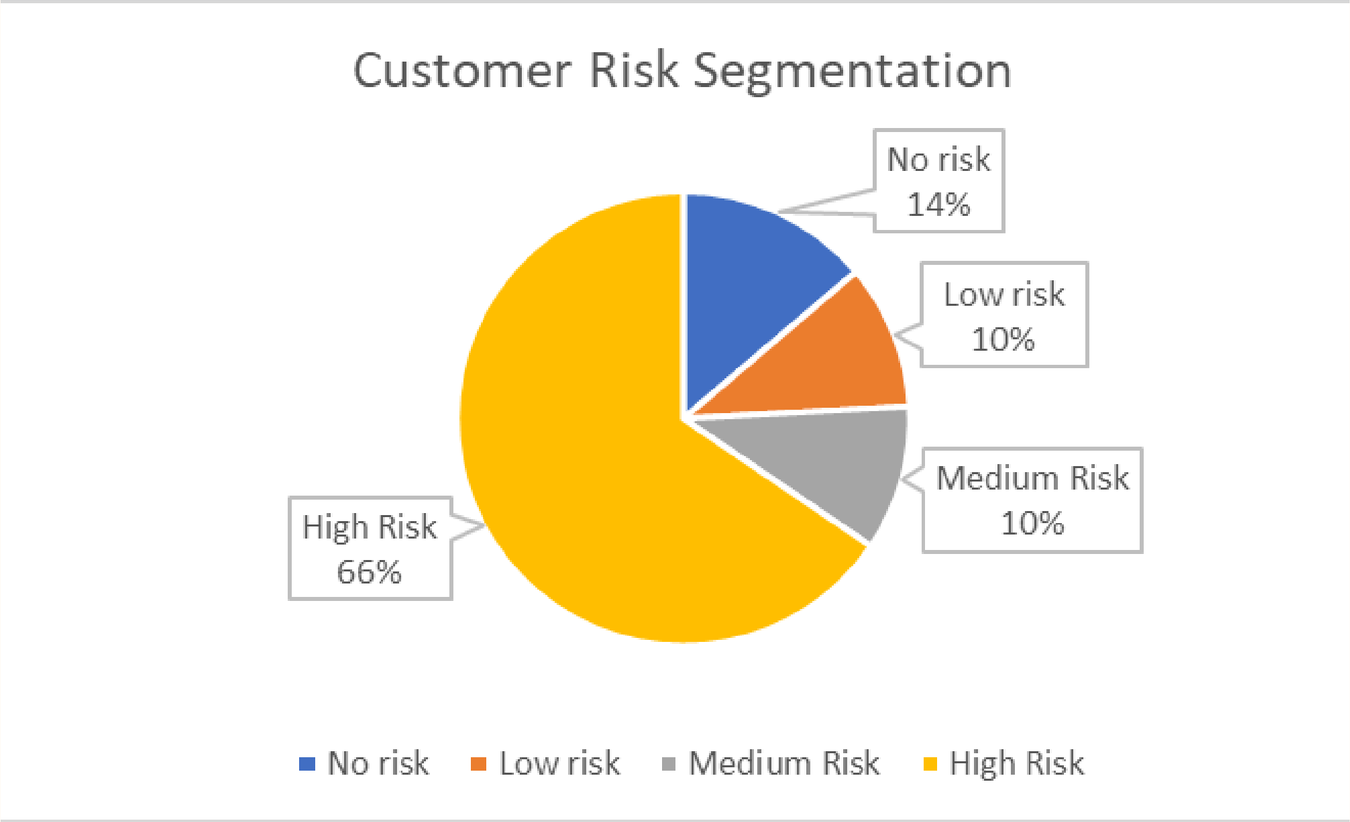
Findings

- Demand fluctuate across months.
- Overall trend represent modedrate growth.

Key Insight

- Forecast enables smarter inventory planning and demand anticipation.

Customer Risk Analysis



Findings

- Majority of customers show delayed payment and outstanding dues.

Key Insight

- High concentration of risky customers indicates serious cash flow and credit risk for business.

Recommendations

Prioritize Category A SKUs to ensure consistent revenue and sales.

Revision of credit terms for High risk customers such as advance payments.

Integrate Forecasting into procurement planning for operational efficiency.

Dedicated Recovery focus on old dues like blocking new orders until old dues cleared.

Conclusions

- Demand is not stable and needs planning.
- Sales are dependent on few key products.
- Majority customers show payment delays and high outstanding amount.
- These issues affect inventory decisions and cash flow.
- Use forecasting for better planning.
- Improve credit control and payment tracking.
